

Rapid Response – Burglary Alarm Notification

Dear customer,

The Chubb SMC Alarm Response Center is pleased to introduce Operator Assist, our automated alarm notification operator. When activated, the Chubb SMC Operator Assist platform will make near instantaneous phone calls to all keyholders listed as emergency contacts within the account (in succession).

Effective immediately, your burglary alarm notification will be delivered via our automated system, Operator Assist. If a first responder, such as police or guards are on file and are part of the instructions, a live alarm operator will attempt to dispatch them while Operator Assist attempts to make contact. Dispatches to police are subject to local by-laws and regulations.

Why has my response level changed?

To meet and exceed expectations of rapid and reliable service, Chubb SMC has tailored our burglary alarm response based on risk level, which is determined by a few factors, namely the:

1. type of location.
2. certification of location.
3. alarm activity.
4. customer perspective.
5. response required.

Using Operator Assist will ensure Chubb SMC's Alarm Response Center (ARC) remains vigilant for actual alarm events with criminal activity.

Rapid Response Burglary Alarm Notification Process

When Chubb SMC's ARC receives a burglary alarm the following occurs:

1. Our Operator Assist system initializes to call the emergency keyholder list phone number.
 - a) Operator Assist will use the alarm monitoring station's phone number **1-866-271- 8415**) to call out, which is the same phone number a live operator would use.

Rapid Response Burglary Alarm Notification Process (Contd.)

- b) Operator Assist will vocally identify itself upfront – “This is your alarm monitoring station calling” – ask for the keyholder by name, then prompt for the call taker to “press 1 to accept or press 2 to reject the call. Please note: pressing 2 will remove the keyholder from the emergency call list.
- c) Operator Assist will provide the site name, site address and a description of the first burglary alarm zone triggered in the alarm incident.
- d) Once the call taker listens to the entire message, several options are provided:
 - i. Label the alarm as a false alarm and cancel the incident.
 - ii. Dispatch the first responders on file.
 - iii. Acknowledge the alarm and take no action.
 - iv. Speak with an alarm operator.
 - v. Remove themselves from the emergency contact list.
 - vi. Hear the message again.

How do I amend my alarm instructions or call list?

If you'd like to change your call list or alarm instructions on file, please email ca_cam@chubbfs.com or call us at **1-800-668-2482**, option 2.

How do I stop calls made by Operator Assist?

The Chubb SMC Operator Assist system is an integrated, automated, and critical part of our alarm notification process. Chubb SMC's Operator Assist can only be halted from calling if:

1. The call taker acknowledges the alarm condition (stops subsequent calls for the same alarm incident).
2. The alarm condition no longer exists (issue has been resolved).
3. The alarm zone is placed on test (stops further calls if the same alarm zone is triggered).
4. The keyholder information is removed from the call list.
